Flexible

Comprehensive

Efficient

Elastic Managed Cloud™

Cloudten's on-demand Elastic Managed Cloud™ service aligns perfectly with the flexible, efficient, pay only for what you use philosophy of the cloud.

Unlike many other managed services providers whose business has been about traditionally hosted infrastructure, we were born in the cloud. Our managed cloud service was designed specifically for cloud infrastructure and workloads.

We leverage AWS specific tools and techniques to continuously optimise your AWS environment for cost, stability and security. Importantly, Elastic Managed Cloud's pricing model does not disincentivise cost cutting across your AWS estate as many other MSPs do.

Cloudten provides cloud solutions and managed services, helping enterprise organisations implement, manage, and intelligently integrate cloud technologies.

Cloudten's Elastic Managed Cloud™ is a premium offering that provides 24x7x365 management, monitoring, provisioning and troubleshooting of your cloud estate.

Many managed services providers today have moved to offer managed cloud services. Unfortunately, these are often re-hashes of their traditional on-premises managed services contracts and are based on inappropriate, inefficient or outdated frameworks that do not map well to the cloud.

Ongoing cloud monitoring and optimisation is crucial to gain and maintain the benefits of hosting in the cloud. Increased security and regulatory risks, unused resources and inappropriately sized instances are all common in an unmanaged cloud environment. With Elastic Managed Cloud™ Cloudten are redefining managed services for the cloud age and addressing these issues in an easy to consume on-demand model.

Managed services in the cloud is often based on percentage of AWS spend, this model does not align with customer interests as MSPs are disincentivised to drive down costs. Managed services costs can also vary wildly from month to month making financial commitments unpredictable. Cloudten's innovative pricing model ensures that we will always act in your best interests.

Elastic Managed Cloud™ includes a named AWS Professional certified architect who leads a dedicated support team on a per customer basis ensuring important environment, application and historical knowledge is retained.

Log Monitoring and Analytics:
Collection and review of all system, application, and infrastructure logs. Review of logs and escalation of related findings as appropriate.

Cloud Optimisation:
Cloudten continuously monitors your cloud utilisation and gives early warning of potential issues, opportunities to cut costs by downgrading cloud instances, downsizing unnecessary resources and imposing up-time & down-time policies.

Infrastructure and Application Monitoring:
Cloudten works with your team to design and deploy appropriate application and infrastructure monitoring. Custom dashboards give complete visibility of the health of your cloud estate. 24x7x365 monitoring of server and application uptime and resource usage.

Managed Security and SIEM Monitoring:
Cloudten's security focused experts partner with industry leading managed security providers to deliver best in class security solutions across your AWS infrastructure.
